FRONT & BACK LABELING MACHINE

Pack Leader boasts a broad selection of quality, versatile labeling machines geared toward the specific labeling requirements of companies across the globe. As part of Pack Leader's impressive product portfolio, the PL-622 labeling system is a fully automatic labeler with exceptional speed, flexibility, and dependability that sets the machine apart from the competition.

Flexible Design

Applying labels to the front and back of products is built into the Inline PL-622's two-side apply design. True to Pack Leader's commitment to flexibility and choice, this machine can also be configured for a one-side apply, and it can also come with an optional wrap station. The PL-622 is one machine that accommodates a wide variety of needs.

Simple to Use

The built-in operating instructions and trouble-shooting guide offered on the operator interface, as well as hand wheels that provide for simple adjustments, enable quick set-up and easy changeover.

Exceptional support

Our company is built around one simple philosophy; to be the most proactive and supportive business in the packaging industry. If you are the type of person who is looking to find a machinery supplier that you can call a partner, one that understands your needs and is driven entirely by the service and support they offer... we look forward to working with you.

Flexible

- Regardless of product size or shape, the PL-622's product sensor can be adjusted for various applications. With the manual position setting, your labels are placed accurately on the bottle, every time.
- Depending on your needs, this machine can be used either for in-line automatic or semi-automatic applications.
- If needed, the synchronized hot-foil printer controls allow the hot-foil printer to work in sync with the labeler to ensure accurate code placement. This integrated feature simplifies label customization and can easily be turned off or on.

Productive

- The Production Preset function enables the machine to automatically stop once the pre-set quantity of products has been labeled.
- The Label Countdown feature allows you to see precisely how far along the project is as the production run progresses.
- The Container / Production Run Counter provides the total production number for the day.
- The battery-free microprocessor control system can maintain default settings and memory even after the machine sits idle for a long period of time. Up to 30 settings can be stored for future use, saving you time later in re-inputting the necessary information.

Practical

- The PL-622 can easily be moved to other production areas to allow for changing in production or products.
- The machine's height-adjustable conveyor affords you exceptional convenience and flexibility.
- The machine is exceptionally durable, with a stainless steel and anodized aluminum design that can withstand a wide variety of environments.

Compliant

The PL-622 is manufactured in compliance with Good Manufacturing Practices (GMP) standards, and according to strict ISO 9001 quality control procedures. With Pack Leader's compliant labeling machine, you gain a high comfort level as you undergo the required quarterly inspections from industry compliance auditors.
